

Dear Valued Reseller,

To avoid any confusion and compatibility issues, we ask that you review the following information and confirm that you ordered the correct software for your customer. Tharo Systems will not ship your order until we receive email confirmation that you have read this letter. Thank you!!

EASYLABEL Terminal Server:

- installs on a single Windows Server acting as a Terminal Server
- workstation log into the Terminal Server to use the EASYLABEL software
- it does not matter if this Terminal Server is a physical or virtual machine*, as long as the WIBU license dongle is recognized by the Windows Device Manager

EASYLABEL Multi-User:

- will NOT work with a Terminal Server
- installs on every Windows machine on the customer's network that will potentially need to use the EASYLABEL software
- one WIBU license dongle will be connected to one Windows PC or server on the network, which will function as the EASYLABEL License Server
- it does not matter if the EASYLABEL License Server is a physical or virtual machine*, as long as the WIBU license dongle is recognized by the Windows Device Manager

*If a virtual machine cannot connect to a physical port on the host machine, we recommend that you use a device like the AnywhereUSB hub made by Digi. Tharo does not offer technical support for these devices, but we have many customer successfully using them.
